

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-10 (canceled)

Claim 11 (currently amended): An apparatus for manufacturing an organic electroluminescence display, the organic electroluminescence display having a substrate, a first electrode layer formed on the substrate ~~in a predetermined pattern~~, an organic layer including a plurality of organic material layers stacked on the first electrode layer in a predetermined pattern and a second electrode layer formed on the organic layer, the apparatus comprising:

~~an~~ a first alignment mechanism for aligning a mask, having openings corresponding to the predetermined pattern, to the substrate on which the first electrode layer is formed and for detachably attaching the mask and the substrate;

a first formation unit including a plurality of vacuum processing chambers for sequentially forming a plurality of the organic material layers on the substrate at a first color position, the substrate being attached to the mask; and

a second alignment mechanism for changing the alignment between the substrate and the mask, and for detachably attaching the substrate and the mask again; and

a second formation unit including a plurality of vacuum processing chambers for sequentially forming the organic material layers on the substrate at a second color position, the substrate being attached to the mask,

wherein each of the vacuum processing chambers correspond to each of the organic material layers, and

wherein the second alignment mechanism is provided to connect the first formation unit and the second formation unit in series thereby providing flow-through processing, and is configured to perform the alignment changes in a vacuum atmosphere

~~a transferring mechanism for transferring the attached mask and substrate to one of the plurality of vacuum processing chambers to sequentially transfer the attached mask and substrate among the plurality of the vacuum processing chambers.~~

Claim 12 (cancelled).

Claim 14 (original): An apparatus for manufacturing an organic electroluminescence display as claimed in claim 11, further comprising a vacuum transfer chamber connecting the vacuum processing chambers, wherein the transferring mechanism is arranged in the vacuum transfer chamber.

Claim 15 (original): An apparatus for manufacturing an organic electroluminescence display as claimed in claim 11, further comprising an attachment fixture for attaching the substrate and the mask.

Claim 16 (original): An apparatus for manufacturing an organic electroluminescence display as claimed in claim 15, wherein the mask is formed of a magnetic material, and the attachment fixture is provided with a contact surface fully contacting a non-film formation surface side of the substrate, has at least the contact surface formed of a plate-shaped magnet, and has the substrate sandwiched between the mask and the contact surface attached with the mask by a magnetic force of the magnet.

Claim 17 (cancelled).

Claim 18 (currently amended): An apparatus for manufacturing an organic electroluminescence display as claimed in claim ~~17~~11, the apparatus further comprising:

a separating mechanism for separating the mask and the substrate after forming the second organic layer; and

a vacuum chamber for forming the second electrode layer on the substrate separated from the mask so as to cover the first and second organic layers.

Claim 19 (currently amended): An apparatus for manufacturing an organic electroluminescence display as claimed in claim ~~18~~11, wherein the first- ~~and second and third~~ alignment mechanisms comprise a mask support member configured to support the mask, a substrate support member configured to support the substrate, an attachment fixture support member configured to support the attachment fixture, and a movement mechanism for changing relative positions between the ~~mask support member, the substrate support member, and the attachment fixture support member, whereby, wherein~~ the mask and the substrate are aligned, ~~and the mask and the substrate are at least one of attached, and or separated by the attachment fixture by changing the relative positions of the support members.~~

Claim 20 (new): An apparatus for manufacturing an organic electroluminescence display as claimed in claim 11, further comprising a loading unit including a plurality of vacuum processing chambers, the plurality of vacuum processing chambers including the first alignment chamber, wherein the loading unit is connected in series with the first formation unit by a transfer chamber, thereby providing flow-through processing.

Claim 21 (new): An apparatus for manufacturing an organic electroluminescence display as claimed in claim 11, further comprising:

a third formation unit including a plurality of vacuum processing chambers for sequentially forming the organic material layers on the substrate at a third color position, the substrate being attached to the mask; and

a third alignment chamber connecting the second formation unit to the third formation unit;

wherein the first formation unit, the second alignment chamber, the second formation unit, the third alignment chamber, and the third formation unit are connected in series.
